

Qube Solutions — TODO

Ordered by priority. Work top to bottom.

*Move completed items to **## Done** at the bottom.*

● Critical (Do This Week)

- ☐ **Fix Contact.jsx pricing** — still shows old packages (\$2,000 etc.), needs to match Launch / Autopilot / Momentum
 - ☐ **Register the LLC** — Idaho SOS online filing, ~\$100. Don't take money without this.
 - ☐ **Open a business bank account** — keep revenue separate from personal from day one
 - ☐ **Set up Wave** (wave.com) — free invoicing + bookkeeping. Create your first invoice template.
-

● High Priority (This Month)

Business Setup

- ☐ Get a business phone number (Google Voice is free — forward to your cell)
- ☐ Set up Google Workspace — boyd@gubesolutions.com looks more professional than Gmail
- ☐ Create a simple service agreement / contract (1 page, use a free template from Bonsai or Docracy)
- ☐ Create a proposal template in Google Docs or Notion

Website

- ☐ Screenshot Phoenix Stoneworks site for the portfolio card (add a real preview image)
- ☐ Test the contact form end-to-end on mobile (does the mailto open? Does it autofill correctly?)
- ☐ Set up Google Search Console for qube-solutions.com
- ☐ Add Google Analytics 4 to the Qube Solutions site itself

Operations

- ☐ Set up Notion workspace:
 - Create a CRM board: Lead → Proposal → Active Build → Launched → Monthly Care → Churned
 - Create a client page template (see SOP.md Section 4)
 - ☐ Set up 1Password — start storing all credentials here, never in a doc or browser autofill
 - ☐ Set up Calendly — connect to your calendar, create a "Free Audit Call" event (15 min)
-

● Before First Client

- ☐ **Build the AI chatbot MVP** — core feature of the Autopilot package, can't sell it without it
 - OpenAI API account + API key
 - System prompt template ready (see SOP.md Section 7)
 - Lead capture working (name, phone, what they need)
 - SMS alert to your phone via Twilio
 - Test on a demo page before deploying to a client
- ☐ Create an onboarding questionnaire (Google Form — use the questions in SOP.md Section 5)
- ☐ Write up Phoenix Stoneworks as a case study (1 page: challenge, what you built, result)

- ☐ Get a testimonial / Google review from Phoenix Stoneworks
 - ☐ Create a Google Business Profile for Qube Solutions
-

● Product / Site Improvements

- ☐ Add real preview images to portfolio cards (screenshot tools: Screely, BrowserFrame)
 - ☐ Add an FAQ section to the Contact page (reduces friction before they fill out the form)
 - ☐ Connect Formspree (or Basin) to the contact form — replaces the mailto hack with real form submissions
 - ☐ Add a "Free Audit" landing page — one focused page for cold outreach links
 - ☐ Add social sharing meta tags (og:title, og:image) so links look good when shared
 - ☐ Set up a `/sitemap.xml` for SEO
 - ☐ Consider adding a blog (1 post/month targeting local SEO terms like "web design Boise Idaho")
-

● Bastion MSP

- ☐ Pull latest changes from dev workstation (git pull / merge)
 - ☐ Sync screenshots for the Qube Solutions portfolio card
 - ☐ Clarify: is the portal.bastionmsp.com publicly linkable, or is it client-only? (decide whether to feature it in the portfolio or just mention it)
 - ☐ Cross-sell opportunity: could Bastion MSP clients be pitched a website refresh through Qube Solutions?
-

■ Future / Backlog

- ☐ Client portal (login page where clients see their stats) — Supabase + Next.js, Phase 3
 - ☐ Automated monthly report generation (pull GA4 via API)
 - ☐ Referral / affiliate program (\$200–500 per referred client)
 - ☐ Raise Autopilot pricing to \$499/mo once you have 5+ clients (validate before raising)
 - ☐ "Website in a Week" productized offer — fixed scope, fixed \$1,500, 5-day turnaround
 - ☐ LinkedIn presence — 2 posts/month, case studies, tips for service business owners
 - ☐ Local Facebook Groups — join Boise/Treasure Valley small business groups, provide value
 - ☐ Explore: Qube Solutions + Bastion MSP bundle (web + cybersecurity for SMBs)
-

✅ Done

- ☒ Rebuild site with AI receptionist positioning (Home, Services, Pricing)
- ☒ New package structure: Launch / Autopilot / Momentum
- ☒ Add About page to nav
- ☒ Add Bastion MSP to portfolio
- ☒ Update About page with Bastion co-founder background
- ☒ Fix PackageCard schema mismatch (tagline + billing props)
- ☒ Fix Vercel 404 routing (SPA rewrite rule)
- ☒ Switch to dark sleek design with electric blue accent
- ☒ Full-width section architecture (surface + section)

- ☒ Set up MeshGradient animated background
- ☒ Deploy to Vercel via GitHub
- ☒ Create ROADMAP.md
- ☒ Create SOP.md
- ☒ Create TODO.md
